

Frontend API Documentation

This document contains the API endpoints for the four backend services: **Auth Service**, **Customer Profile Service**, **KYC Service**, and **Account Service**.

1. Auth Service

Auth Controller (/auth)

Handles public authentication and registration endpoints.

Method	Endpoint	Description	Roles Allowed	Request Body
POST	/auth/register	Register a new customer	(Public)	CustomerRegisterReque
POST	/auth/login	Login and get JWT token	(Public)	LoginRequest

Admin Controller (/admin)

Handles admin operations for employee management.

Method	Endpoint	Description	Roles Allowed	Request Body
--------	----------	-------------	---------------	--------------

GET	/admin/ hello	Test admin access	ADMIN	None
GET	/admin/ test-token	Decode and test a token	(Public/ Any)	Query Param: token
POST	/admin/ create- employee	Create a new employee	ADMIN	EmployeeRequest
GET	/admin/ employees	Get all employees	ADMIN	None
GET	/admin/ employees/ {id}	Get employee by ID	ADMIN	None
PUT	/admin/ employees/ {id}/ disable	Disable employee account	ADMIN	None
PUT	/admin/ employees/ {id}/ enable	Enable employee account	ADMIN	None
PUT	/admin/ employees/ {id}/ reset- password	Reset employee password	ADMIN	ResetPasswordRequest

2. Customer Profile Service

Customer Profile Controller (/profile)

Handles customer profile management.

Method	Endpoint	Description	Roles Allowed	Request Body
POST	/profile	Create a profile	CUSTOMER	CustomerProfileRequest
GET	/profile/me	Get own profile	CUSTOMER	None
PUT	/profile/me	Update own profile	CUSTOMER	CustomerProfileRequest
GET	/profile/all	Get all profiles	EMPLOYEE, ADMIN	None
GET	/profile/{userId}	Get profile by User ID	EMPLOYEE, ADMIN	None

3. KYC Service

KYC Controller (/kyc)

Handles Know Your Customer (KYC) submissions and approvals.

Method	Endpoint	Description	Roles Allowed	Request Body
POST	/kyc/submit	Submit KYC details	(Inherits from Security)	KycRequest
GET	/kyc/me	Get own KYC status	CUSTOMER	None

GET	/kyc/ pending	Get all pending KYC requests	EMPLOYEE, ADMIN	None
GET	/kyc/ user/ {userId}		EMPLOYEE, ADMIN	None
GET	/kyc/all	Get all KYC records	ADMIN	None
PUT	/kyc/ {kycId}/ approve	Approve a KYC request	EMPLOYEE, ADMIN	None
PUT	/kyc/ {kycId}/ reject	Reject a KYC request	EMPLOYEE, ADMIN	RejectKycRequest (needs remarks)

4. Account Service

Account Controller (/accounts)

Handles bank account opening, listing, and lifecycle management.

Method	Endpoint	Description	Roles Allowed	Request Body
POST	/accounts/ open	Request to open an account	CUSTOMER	OpenAccountRequest
GET	/accounts/me	Get own accounts	CUSTOMER	None

GET	/accounts/ user/ {userId}	Get accounts by User ID	EMPLOYEE, ADMIN	None
GET	/accounts/ pending	Get pending account requests	EMPLOYEE, ADMIN	None
GET	/accounts/ all	Get all accounts	EMPLOYEE, ADMIN	None
PUT	/accounts/ {accountId}/ block	Block an account	EMPLOYEE, ADMIN	None
PUT	/accounts/ {accountId}/ close	Close an account	EMPLOYEE, ADMIN	None
PUT	/accounts/ {id}/approve	Approve an account request	EMPLOYEE, ADMIN	None
PUT	/accounts/ {id}/reject	Reject an account request	EMPLOYEE, ADMIN	RejectAccountRe (needs reason)

[!TIP] Ensure that all requests requiring roles (CUSTOMER, EMPLOYEE, ADMIN) have the `Authorization: Bearer <token>` header set in the frontend HTTP client.

Also, cross-origin resource sharing (@CrossOrigin) is enabled on all these controllers, making it easier for the frontend to consume them without CORS issues.
